Let's Start!

Relevant Aspects About Hypertext Preprocessor

Learning Outcome:

Understand information about web applications, their principles and basic concepts in a range of work contexts. Describe applications for an operating system for personal computers in a range of work contexts.

Can Do Statements:

- I can say what PHP is.
- I can talk about the capabilities of PHP.
- I can give reasons to use PHP.

Ask your partner:

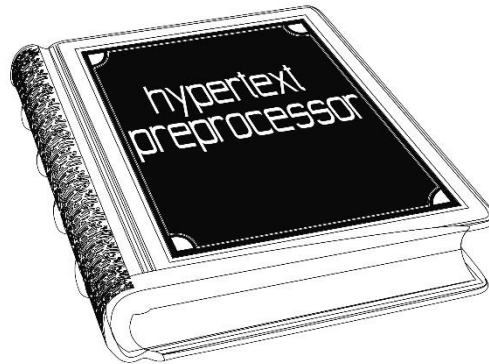

- What do you think the best programming language for beginners is?
- What features does a good programming language need?

Let's Explore!

Lucas explains to Sophie why she should use PHP.

Instructions: Read the text below.

- Sophie:** Lucas! I don't know what to do! I need to choose between using JavaScript and using PHP, but my knowledge on PHP is as deep as a glass of water.
- Lucas:** Don't freak out, Sophie. I believe you should use PHP.
- Sophie:** Do you know how to use it?
- Lucas:** Yes. I can tell you how to manage it.
- Sophie:** Sure! I know that WordPress uses PHP, and I understand that it is the biggest blogging system; indeed, I think PHP must be very intricate to use.
- Lucas:** It isn't, actually; let me explain. PHP stands for Hypertext Preprocessor; it is a widely used open-source scripting language. It's free to use, and the best thing, it is executed on the server. It is deep enough to run on Facebook!
- Sophie:** Wait a minute, I've heard of it! Beginners usually start with this one because it can be handled easily, right?
- Lucas:** That's true. Many people use it because it can contain text, HTML, CSS, PHP code and JavaScript.
- Sophie:** With all those features, I guess it can be used to generate dynamic page content!
- Lucas:** Correct. Data can be opened, read, written, deleted, collected and even closed. PHP is quite versatile.
- Sophie:** Can it send and receive cookies?
- Lucas:** That and even more! You can modify the database and encrypt data. If you want to know how to control user access, PHP is the best alternative.
- Sophie:** Okay, you convinced me; I'm going to use PHP, but my computer uses Linux, can it run it?
- Lucas:** Of course, it runs on many Operating systems, including Windows and even Mac Os X. It is also compatible with Apache and IIS.
- Sophie:** Lucas, you seem very knowledgeable about PHP.
- Lucas:** Yes! Since I discovered it, it has made my job much easier. Then, if you want, I can show you how to operate other systems with PHP.

Let's Practice!

I don't know what to do!

Instructions: Read the dialogue and circle all the questions within sentences.

Pedro: I don't know what to do. I need to decide between JavaScript and PHP.

Tom: Well, you know that PHP is the biggest blogging system, but I don't know how intricate it is.

Pedro: It isn't. I need to know where to get it and I need to clarify more its definition.

Tom: Well, it is an open source scripting language, but I don't know how free it is.

Pedro: It is free to use, and the best thing, it is executed on the server. Now we need to discover how to implement in the system.

Let's Practice!

What is PHP?

Instructions: Select the correct answer.

1. PHP _____ on different operating systems.
 - a. can being run
 - b. can be run
 - c. can be running
 - d. can be ran
2. It _____ on the server.
 - a. can be executed
 - b. can was executing
 - c. can being executed
 - d. can be execute

☐	☐

Target Words

- **open-source** (adjective): free software and available to anyone
e.g. PHP is an open-source scripting language.
- **Intricate** (adjective): complicated and hard to understand
e.g. PHP must be very intricate to use.
- **freak out** (phrasal verb): to get angry
e.g. Don't freak out, Sophie. I believe you should use PHP.
- **Convince** (verb): to persuade someone about something
e.g. Okay, you convinced me; I'm going to use PHP, but my computer uses Linux, can it run it?
- **Versatile** (adjective): handy and useful for several purposes
e.g. Data can be opened, read, written, deleted, collected and even closed. It is very versatile.

Learning Points

Questions Within Sentences: How to - Where to - What to

Sometimes, you want to ask a question inside a negative or affirmative sentence, in those cases, we use **how to**, **where to**, and **what to**.

To ask questions within a negative or affirmative sentence, follow this structure:

Sentence + **how to / what to / where to** + verb + complement

Examples:

*I don't need to ask **how to use** PHP, I have a master.*

*Let me know **where to go**.*

*I don't know **what to do** with those programming languages.*

Examples

- *Lucas! I don't know what to do! I need to choose between using JavaScript or using PHP.*
- *If you want to know how to control user access, PHP is the best alternative.*

Passive of Modal Verbs: Can

We use the **passive voice** when we want to focus the attention on the object or action and not on the person who does it.

Passive voice can be used anytime; we are going to focus on its use along the modal verb **can** this time.

Can shares similar uses with **may** and **might**; the last two are more formal. Plus, **can** is used to express possibility, permission or ability.

Look at the following structure:

Subject + **can be** + **verb in past participle** + complement

Examples

*This software **can be modified** by the experts.*

*This item **can only be bought** in the online store.*

Examples

- *Beginners have it because it can be used easily, right?*
- *With all of that... it can be used to generate dynamic page content!*
- *Data can be opened, read, written, deleted, collected and even closed. It is very versatile.*
