Let's Start!

Discussing Output Statements in PHP

Learning Outcome:

Understand information about web applications, their principles and basic concepts in a range of work contexts. Describe applications for an operating system for personal computers in a range of work contexts.

Ask your partner:

- Do you know how to generate data to the screen? Explain.
- What is one of the advantages of using statements? Explain.

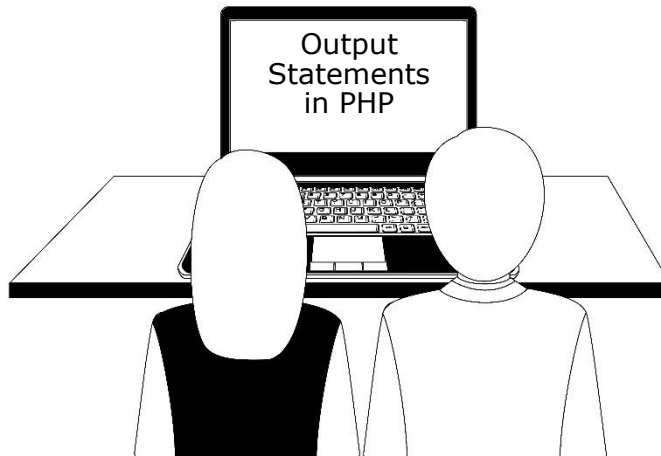

Can Do Statements:

- I can mention the two basic ways to get output in PHP.
- I can talk about the echo output statement.
- I can discuss ideas about the print output statement.

Let's Explore!

Susanne and Michael discuss about the print and echo statement.

Instructions: Read the text below.

- Susanne:** Hey Michael, don't you think that the echo and print statements are basically the same?
- Michael:** Well, considering that these two statements are the basic ways to get output in PHP, and both of them can be used with or without parentheses. Yes, they are. However, they have some slight differences.
- Susanne:** Really? And, what are those?
- Michael:** I was going to get at it, but you interrupted me!
- Susanne:** I'm sorry! Please, continue.
- Michael:** Initially, the echo statement cannot return value. I think that's the biggest difference, don't you agree?
- Susanne:** I can't agree with you, yet. I need to understand it all first.
- Michael:** That's true. Anyways, other characteristics are that the echo statement can take multiple parameters.
- Susanne:** Wait, Don't people use rarely echo statement?
- Michael:** Yeah, it is rarely used, but you need to know that to be able to improve on it. The last difference is that echo is way faster than the print statement.
- Susanne:** Okay, let's move to the print statement. I'm going after you with all this PHP learning.
- Michael:** Well, the print statement has a statement value of 1, so you can use it in different expressions. In addition, while print statement is not as fast as the echo statement, it can take on arguments. That's it.
- Susanne:** Thanks for all the explanation. The differences are pretty small. I think I'm going to stick to the echo statement. It seems more useful.
- Michael:** That's a good idea, but it's important to improve upon these two concepts because I just gave you general information about them.

Let's Practice!

Basic Ways to Get Output in PHP.

Instructions: Use the words from the word bank to complete each sentence.

Word Bank

get at / go over / go after / improve on / go on / sticks to /
upon

1. Michael doesn't comprehend what the teacher tries to _____ about the echo and print statements.
2. Michael wants to _____ the ways to get output in PHP because there are a lot of problems with it.
3. Susanne _____ idea of scripting language used on the web.
4. To output data, a parenthesis () can _____ the echo and the print statements.
5. Echo and print improve _____ PHP statements to have better procedures.

Let's Practice!

Michael sends an email to Susanne.

Instructions: Read the text again. Circle the correct word to complete the sentence.

Susanne, (Print / Statement / Echo) output statement is pretty similar to the print one, (do / does / don't) you agree with the no return (price / cost / value) of echo statements? If so, I need to (go after / get at / go with) it again. Actually, I don't know what happens to you, (do / did / didn't) you understand the use of echo statements?

Extension Activity

Echo vs Print in PHP

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about Echo and Print in PHP.
- Design a comparative chart that shows similarities and differences between these two statements.
- Share your chart with the rest of the class.

Self-Assessment

Yes
No

- I look for information about Echo and Print in PHP.
- I design a chart that compares Echo and Print in PHP.
- I share my chart with the rest of the class.

☐	☐

Target Words

- **print statement** (adverb): a method used to generate information
e.g. The print statement has a statement value of 1, so you can use it in different expressions.
- **Echo statement** (noun): a command used to output data
e.g. Initially, the echo statement has no return value.
- **Slight** (adjective): a small amount of something
e.g. But, they have some slight differences.
- **Stick to** (phrasal verb): To follow, or to keep doing something as always
e.g. I think I'm going to stick to the Echo statement. It seems more useful.
- **Get at** (phrasal verb): to reach to a specific topic or point in a conversation
e.g. I was going to get at it, but you interrupted me.

Learning Points

Phrasal Verbs

Phrasal verbs are verbs compound of two words, which have a different meaning than usual.

It's important to keep in mind that a phrasal verb is made up of two words, a verb and a preposition or an adverb. Look at the following structure:

Subject + **verb** + **preposition / adverb** + complement

There are many phrasal verbs, but in this lesson, we will focus on three.

Get at means to reach to a specific topic or point in a conversation.

Example:

A: *I don't understand your point.*

B: *Let me **get at** the conclusion; then, you'll see that everything makes sense.*

Go after means to follow a dream or goal.

Example:

*After finishing my major, I'm **going after** a job in that famous company of software.*

Improve on / upon means to become better at something.

Examples:

*I think you need to **improve on** your programming skills.*

*You need to **improve upon** the way you execute the codes because there are a lot of technical failures.*

Examples

- *I was going to get at it, but you interrupted me!*
- *Yeah, it is rarely used, but you need to know that to be able to improve on it.*

Learning Points

Negative Questions to Ask for Agreement

You use **negative questions** when you want to confirm an action, an activity or an event.

In English, it is common to make questions in a **negative form** to look for the agreement of the person we are speaking.

Examples

A: **Don't** you think we should divide this work accordingly?

B: I think you are right.

A: Carol, **didn't** you go to the cinemas last night?

B: Yeah, I did. Why?

Examples

- Hey Michael, don't you think that the echo and print statement are basically the same?
- The echo statement has no return value, I think that's the biggest difference, don't you agree?
